Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Schubert, N.D. 1985. The Indian food fishery of the Fraser River: 1984 summary. Can. Data Rep. Fish. Aquat. Sci. 512: 64 p.

Weekly effort levels and catches of the five species of Pacific salmon, steelhead trout and sturgeon are reported for 23 fishing areas in the Fraser River Indian food fishery. The aggregate salmonid catch of 462,995 was the fourth highest on record. Catch by species totalled 22,784 chinook, 5 pink, 357,529 sockeye, 57,297 coho, 18,635 chum, 6,745 steelhead and 2,364 sturgeon. The 1984 management plan addressed conservation concerns for early and middle timing chinook and early Stuart sockeye stocks.

Key words: effort, catch, Fraser River, Indian food fishery, conservation.

RÉSUMÉ

Schubert, N.D. 1985. The Indian food fishery of the Fraser River: 1984 summary. Can. Data Rep. Fish. Aquat. Sci. 512: 64 p.

On présente les taux hebdomadaires d'effort et de prises pour les cinq espèces de saumon, la truite arc-en-ciel anadrome et l'esturgeon capturés dans 23 zones d'exploitation autochtone du fleuve Fraser. Les prises totales de 462,995 poissons sont les quatrièmes jamais enregistrées. Les prises sont réparties par espèce comme suit: 22,784 quinnats, 357,529 rouges, 5 rose, 57,297 cohos, 18,635 kétas, 6,745 truites arc-en-ciel anadromes et 2,364 esturgeons. Le plan gestionnel de 1984 traitait des préoccupations en matière de conservation des stocks de saumon quinnat qui remontent au début et au milieu de la saison et de saumon rouge de la rivière Stuart qui remontent tôt.

Mots-clés: effort de pêche, prises, fleuve Fraser, pêche de subsistance indienne, conservation des stocks de saumon.

INTRODUCTION

The annual documentation of fishery management strategies and the results of those strategies is an important component in the ongoing development of management capabilities. Such documentation was recently completed for the Fraser River Indian food fishery for the period 1951 through 1983 (Schubert 1983, 1984). This report continues that process for the 1984 fishing season. Summarized below are the 1984 management plan, weekly effort levels, and weekly catches of the five species of Pacific salmon, steelhead trout and sturgeon in the twenty-three major fishing areas of the Fraser River Indian food fishery.

FISHING AREAS

The major fishing areas of the Fraser River Indian food fishery and the gear types used in each area are described briefly below. The approximate distance in kilometers from Steveston is bracketed, and the dominant features which delineate fishing areas are shown in Fig. 1.

Steveston Area (below 9.6 km). The main arm of the Fraser River downstream from the westerly end of Deas Island, including Canoe Pass, Ladner Reach and Sea Reach; and the North Arm of the Fraser River from the Knight Street Bridge downstream to 0.9 km off the west end of the North Arm jetty. Drifted gill nets are the only gear used in this area.

Deas Island (9.6 km) to Mission (75 km). The main arm of the Fraser River from the westerly end of Deas Island upstream to Mission; and the North Arm of the Fraser River upstream from the Knight Street Bridge. Set gill nets are the primary gear used in this area; however, in some years the Semiahmoo and Katzie bands conduct a supervised drifted gill net fishery near Barnston Island. These special permit fisheries are conducted with commercial gear and fish to a previously agreed quota.

Mission (75 km) to Hope (151 km). This area is divided into north side and south side subareas which are monitored by the Mission and Chilliwack subdistricts respectively. Set gill nets are the only gear used in this fishing area.

Hope (151 km) to North Bend (206 km). Set gill nets are the only gear used in this area. The area includes a permanently closed section of river extending from a point 6.5 km south of North Bend downstream to Williams Creek, 2.8 km south of Hell's Gate. This closure provides protection from harvest at the Hell's Gate obstruction.

North Bend (206 km) to Texas Creek (280 km). This area was expanded in 1976 to include the section from Lytton upstream to Texas Creek (280 km). Both set gill nets and dip nets are used in this area.

Texas Creek (280 km) to Churn Creek (430 km). Both set gill nets and dip nets are used in this area.

Churn Creek (430 km) to Chilcotin Bridge (491 km). This area extends from the Churn Creek confluence upstream to the Chilcotin Bridge (also known as the Sheep Creek Bridge), southwest of Williams Lake. Dip nets are the only gear used in this area.

Chilcotin Bridge (491 km) to Marguerite (552 km). Dip nets are the only gear used in this area.

Marguerite (552 km) to Hixon (689 km). Dip nets are the only gear used in this area.

Above Hixon (689 km) This fishery occurs in the Fraser River primarily between Hixon and Prince

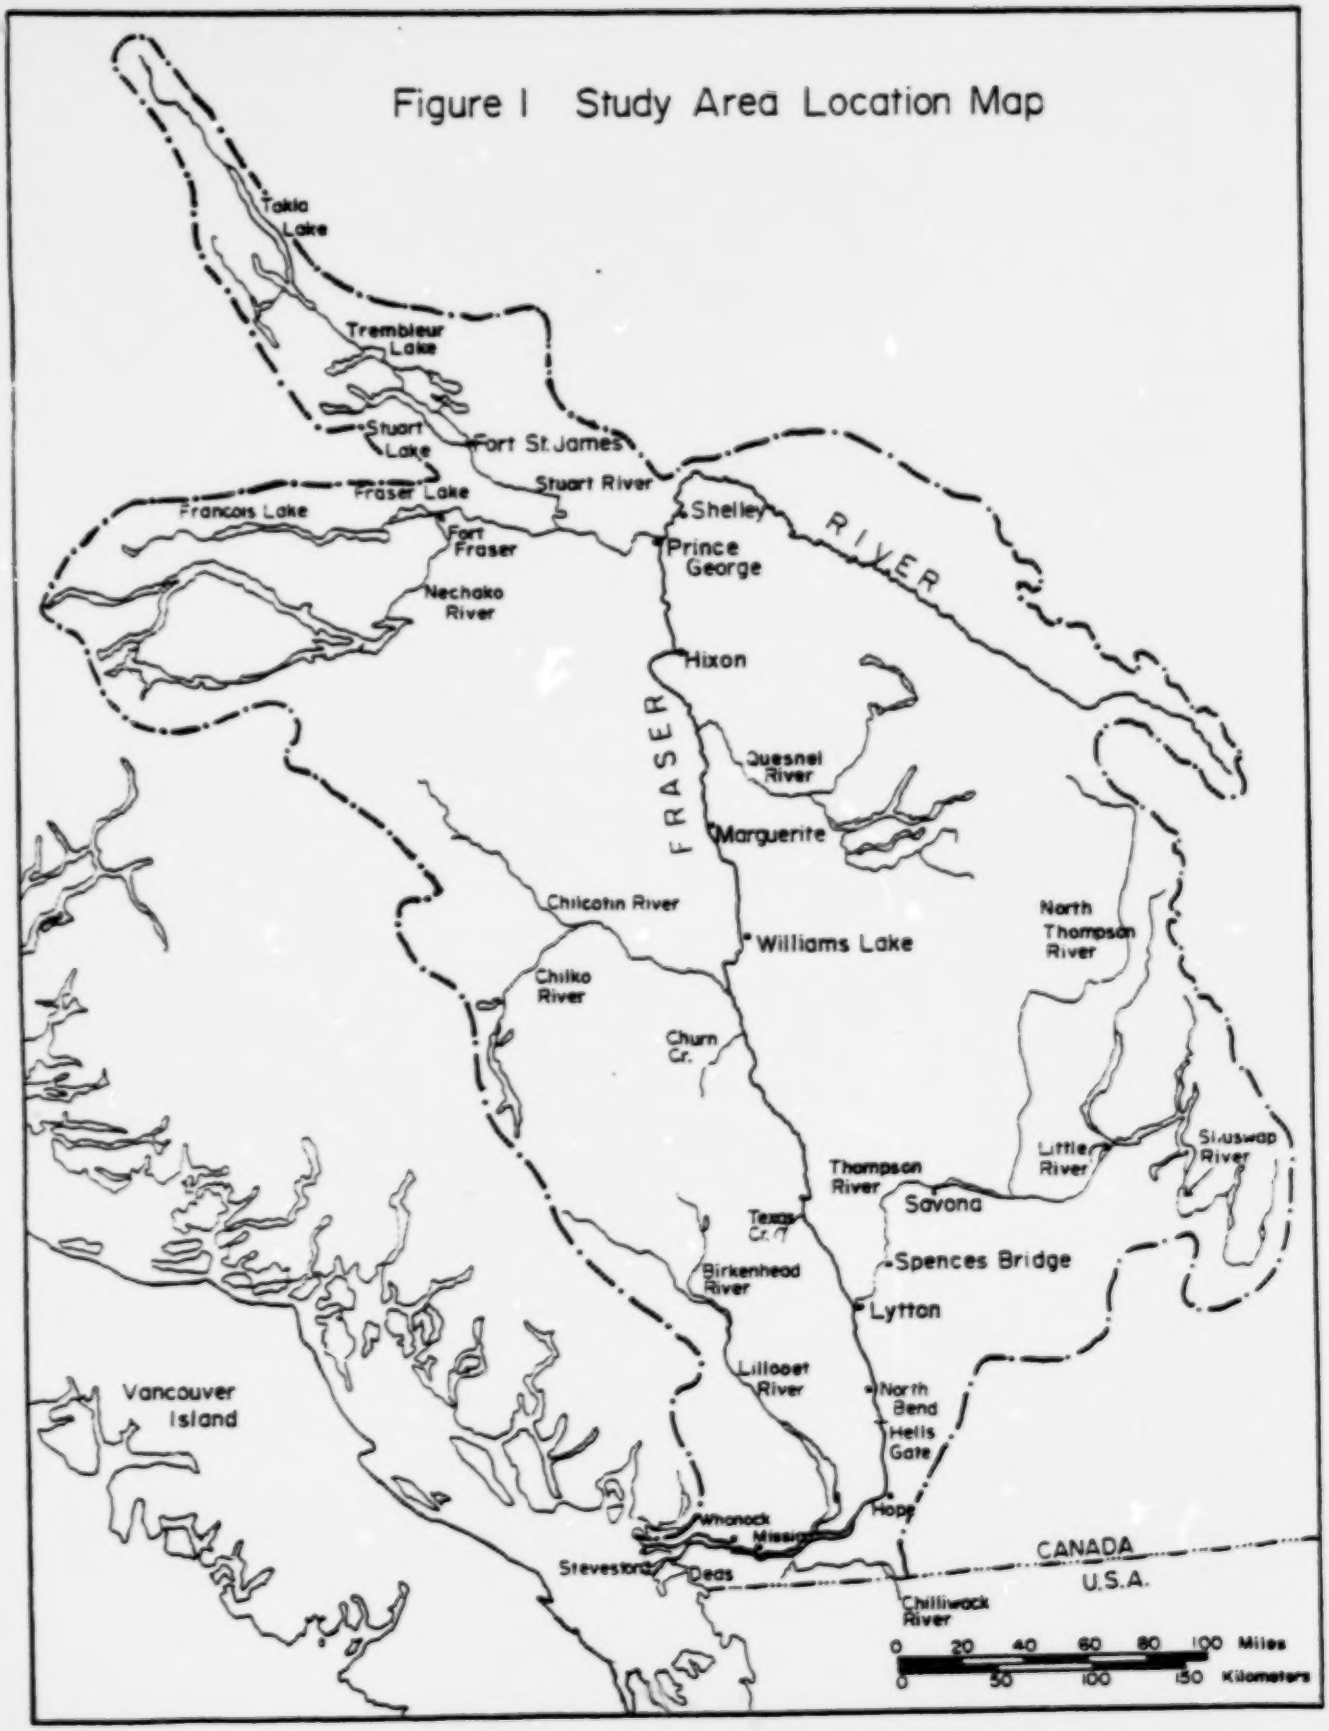

Figure I Study Area Location Map

George (768 km), although a minor fishery also occurs at Shelley (773 km). There are no fisheries in the Fraser River mainstem upstream from Shelley. Set gill nets are the only gear used in this area.

Nechako River System. The Nechako system has been divided into six subareas (note: set gill nets are used in all areas):

- Nechako River, from Prince George (768 km) to the Stuart River confluence (855 km).
- Nechako River, from Stuart River (855 km) to Fort Fraser (958 km), and in the Nautley River at the outlet of Fraser Lake.
- Fraser Lake outlet (958 km) to Francois Lake (990 km). Fishing occurs along the foreshore of Fraser Lake off the reserves at Lejac and the Fraser Lake town site, and in the lower 200 m of the Stellako River.
- Stuart River, from the Stuart River mouth (855 km) to Fort St. James (967 km). The most intensive fishery occurs at the outlet of Stuart Lake.
- Stuart River system, from Fort St. James (967 km) to Trembleur Lake (1035 km). Fisheries in this area occur in the Tachie River at Grand Rapids and off the Tachie River mouth.
- Above the Trembleur Lake outlet (1035 km). Fisheries in this area occur at the Middle River mouth.

Chilcotin River System. This fishery occurs primarily in the Chilcotin River, from the mouth (460 km) upstream to the Chilko River confluence, and in the Chilko River upstream to Henry's Crossing (628 km). Dip nets are the predominant gear; however, a small gaff fishery exists in the Chilko River.

Thompson River System. There are two active fisheries in the Thompson River system:

- Main Thompson River, from Lytton (254 km) to Savona (368 km). Both set gill nets and dip nets are used in this area.
- The Shuswap River, located on the spawning grounds, between the Islands (610 km) and Skookumchuk Rapids (653 km). This is a spear and gaff fishery which harvests spawned-out sockeye and chinook salmon.

Harrison/Lillooet River System. The Harrison/Lillooet system has been divided into three subareas:

- Harrison River mainstem (102 km to 121 km). Both set gill nets and spears are used in this subarea.
- Lower Lillooet River, from the head of Harrison Lake (182 km) to the Lillooet Lake outlet (240 km). Set gill nets are used in this subarea.
- Birkenhead River (268 km). This subarea includes a set gill net fishery at the upper end of Lillooet Lake, and a gaff fishery in the Birkenhead River.

DATA SOURCES

Estimates of catch and effort in the Indian food fishery are compiled on a weekly basis by local fishery officers. Assessment methodologies are sensitive to local fishery conditions and budgetary allocations and, as a result, vary from area to area and within areas through the year. Gear counts may be obtained during ground, river or aerial surveys, while catch per net may be derived from interviews with the fishermen, direct observation or gear

subsamples. Although methods vary, each fishery is generally surveyed one or more times during each weekly open period. Catches are recorded from a proportion of the nets, and total catch for that opening is estimated by applying the observed catch per net to the total gear count.

MANAGEMENT PROCEDURE

The Indian food fishery in the Fraser River is regulated in order to provide a level of access to the available salmon resource sufficient to satisfy the reasonable food fish needs of each band while, at the same time, addressing the conservation requirements of the resource. In the absence of requests from local bands for catch quotas derived on the basis of reasonable food fish needs, a pattern of regulation has evolved which addresses fishery specific variations in stock abundance, gear efficiency and site effectiveness by varying between areas the duration of the weekly fishery. For example, the fishery in the lower Fraser River is limited to three days per week because virtually every Fraser River stock is vulnerable to a gear well suited to the local river morphology. In contrast, the fishery in the Cariboo area (Churn Creek to Hixon, Chilcotin River system) is open seven days per week in recognition of the temporally and numerically limited stock availability, the relatively inefficient gear type traditionally used in the fishery, and the limited availability of effective fishing sites. The basic fishing plan for the Fraser River Indian food fishery, which has been largely unchanged since 1962, is detailed in Appendix 1.

This basic fishing plan may be altered if preseason stock expectations, developed by biologists of the Department of Fisheries and Oceans (chinook, coho and chum salmon) and Fisheries Commission (IPFSC) (sockeye and pink salmon) project a conservation concern for any stock. In that case, the basic plan is modified in order to address the specific conservation concern, and meetings are scheduled with the appropriate bands and tribal councils to discuss any changes. The finalized pre-season plan will then be altered only to address emergency in-season conservation concerns.

1984 MANAGEMENT PLAN

The 1984 Fraser River Indian food fishery management plan addressed two conservation concerns:

1. **Conservation of early and middle timing chinook stocks.** Two specific measures were implemented in the Indian food fishery to reduce interceptions of early and middle timing chinook stocks. First, fishing times in the major chinook interception areas downstream from Williams Creek (near Boston Bar) were reduced to one day/week until the arrival of the first sockeye stocks. This measure was intended to reduce harvest rates on early timing chinook stocks in the fisheries which target specifically on chinook. And second, a maximum mesh size restriction of 152 mm (6 inches) was imposed after the arrival of sockeye to reduce incidental interceptions of middle timing chinook stocks during the fisheries directed at sockeye. This restriction was removed in mid September to permit the use of larger mesh nets during the chum migration period.

Notice was provided at all preseason meetings that a regulation would be introduced in 1985 reducing the maximum gill net mesh size permitted during the migratory period of middle timing chinook salmon to 140 mm (5.5 inches). This regulation was in response to a 1983 assessment of the relative selection of Fraser River

TABLE 1. SUMMARY OF ANNUAL SALMONID CATCH BY SPECIES IN THE FRASER RIVER INDIAN FOOD FISHERY, 1951 TO 1984.

chinook salmon by three different gill net mesh sizes. The study indicated that a reduction in mesh size from 152 mm to 140 mm would reduce the by-catch of chinook salmon without influencing sockeye catchability (Wilson and Pearce 1984).

2. **Conservation of the early Stuart sockeye stock.** Prior to the 1984 fishing season, the IPSFC projected a total return of early Stuart sockeye equivalent to the escapement target of 45,000. In order to conserve this stock, the Fraser River Indian food fishery was closed for a three week period encompassing the migratory period of the majority of this stock. This measure complemented restrictions to all other user groups in order to provide the early Stuart sockeye stock with almost total protection from directed harvest.

No other changes were made to the 1984 management plan. The final 1984 management plan is detailed in Appendix 2.

1984 CATCH

Catches in the Fraser River Indian food fishery during 1984 are reported in detail in Appendices 3 and 4 and are summarized in Tables 1 and 2. The aggregate salmonid catch totalled approximately 462,995, the fourth highest on record after the 1982, 1981, and 1983 caches of 537,000, 532,000 and 483,000, respectively (Table 1). The bulk of the catch was taken in four areas: Mission to Hope (25%), Hope to North Bend (33%), North Bend to Churn Creek (10%) and in the Chilcotin River system (12%).

Sockeye were predominant with a catch of approximately 357,500 taken in 1984, an increase of 92% over the 1980 brood year catch of 186,000 and the highest ever recorded on this cycle. Chinook catches totalled 22,800, an increase of approximately 45% over the 1979 and 1980 brood year catch levels. The 1984 coho catch of 57,300 was the largest ever recorded in the Fraser River Indian food fishery, well above the 1981 brood year catch of 10,700. The 1984 chum catch totalled 18,600, an increase of approximately 50% over the 1980 brood year catch level. Steelhead trout and sturgeon catches totalled 6,745 and 2,364, respectively, the highest ever recorded for each species.
